Re: Bridgestone Sports Co., Ltd. et al. v. Acushnet Co.  
Civil Action No. 05-132 (JJF)

Dear Mr. Seal:

Enclosed, please find production of bates range BSP231978 - BSP231991. This production includes samples of BR-11 and BR-18 shipped to us from JSR, along with material safety data sheets for those rubbers.

Also, please produce 2-kg samples of CB 23 and Shell 1220.

Sincerely,

Brandon M. White

Re: *Bridgestone Sports Co. v. Acushnet Co.*,  
C.A. No. 05-132 (JJF) (D. Del.)  
Bridgestone's March 28 Production of Test Data

Dear Brandon:

Yesterday, we received from you 26 pages of test data, with no explanation from you other than that it is "additional information from Dr. Caulfield." While it is not clear from the documents, the testing appears to relate to the '834 patent, which claims a hardness gradient between the surface of the core and a point at 5 mm from the surface. Your failure to produce this data before yesterday is troubling for several reasons.

First, the data should have been produced long ago. From the dates on the documents, the data appears to have been created between September 7, 2006 and October 31, 2006. It is responsive to several Acushnet discovery requests and my letter to you dated January 30 demanding the production of Dr. Caulfield's raw test data.

Second, the data shows that tests were performed on a number of golf balls labeled "D1" and "N1," which are Dr. Caulfield's designations for the golf balls bearing the "DT So/Lo" and "◀NXT▶" sidestamps, respectively. (See Caulfield 1/16/07 Report at 5). Those tests directly contradict Mr. Cadorniga's statement in his expert report that "[f]or the ◀NXT▶ and DT So/Lo, I understand that no balls were available to properly test the hardness within 5 mm from the surface of the core." (Cadorniga 1/16/07 Report at F-9).

Third, the protocol used to obtain the data appears to be different from the protocol previously disclosed by Dr. Caulfield. For example, the data you produced yesterday provides ten measurements per ball, consisting of five measurements from "Side A" and five from "Side B." The data previously disclosed by Bridgestone, however, contained only five measurements per ball, taken at one location. This also contradicts Mr. Cadorniga's testimony that no additional protocols were used.

MUNICH NEW YORK NORTHERN VIRGINIA PARIS SALT LAKE CITY SAN FRANCISCO TAIPEI WASHINGTON, DC

**HOWREY**<sub>LLP</sub>

Brandon M. White, Esq.  
March 29, 2007  
Page 2

Fourth, and perhaps most troubling, the data you produced yesterday actually shows that the accused Acushnet golf balls do not infringe the '834 patent. Specifically, the '834 patent claims a golf ball wherein "a hardness within 5 mm inside the core surface is up to 8 degrees lower than the surface hardness." The data you produced yesterday, however, provides hardness measurements taken at 5 mm on the same golf balls for which Bridgestone had acquired surface hardness measurements. For a substantial majority of those balls, the difference in hardness between the surface (as disclosed in Dr. Caulfield's previously-produced raw data) and a point within 5 mm of the surface (as shown in the data you produced yesterday) is greater than 8. In some cases, the difference is up to 13. This further calls into question Bridgestone's assertion of literal infringement in its December 18 responses to Acushnet's Interrogatory No. 2.

Please explain why this data was not disclosed previously. Also, please explain who obtained this data (including but not limited to an identification of the testing personnel identified on the documents as "klj" and "PBO") and describe the protocols under which the data was obtained. Please also confirm that all of the samples used to obtain this data were made available to Acushnet when it inspected Bridgestone's samples at Packer Engineering.

We are still reviewing the data, and reserve the right to re-depose Mr. Cadorniga, Dr. Caulfield (whose deposition was taken today) and/or Mr. Jones (whose deposition is scheduled for tomorrow) in light of yesterday's production.

Finally, please confirm unequivocally that Bridgestone has now produced all of the test data or information reviewed or measured by any of its testifying experts.

Regards,

Brian S. Seal

Re: *Bridgestone Sports v. Acushnet*

Dear Brian:

We are in receipt of your letter of March 30, 2007. The data produced on March 28 represents a small amount of data that was generated by Packer Engineering, but it was not previously produced. This data was not used in Dr. Caulfield's report, and was not relied upon by Mr. Cadorniga or any other Bridgestone expert, and there is no intention to rely upon it. During our preparation of Dr. Caulfield on Wednesday, we were confirming that all data generated by Packer Engineering was produced, and found that this data, because it was not in his report, was not previously produced. We therefore sent it to you prior to his deposition.

We understand that Dr. Caulfield and Mr. Jones were examined extensively about this data. We therefore see no reason why you would need to recall them or any other expert.

It is surprising to hear Acushnet's complaints in view of Acushnet's repeated production of documents on the day of deposition or the night before, including the opinion of counsel related to Bridgestone's '707 patent on the morning of Mr. Dalton's deposition, additional testing and protocols (AB 118710-118748) after 7:30 p.m. the night before Dr. Felker's deposition, and a translation of the JP 673 reference relied upon by Dr. Felker produced at the end of Dr. Felker's deposition. The production of documents by Acushnet just prior to a deposition occurred repeatedly throughout fact discovery.

Responding to the last sentence of your letter, we have confirmed with Dr. Caulfield and Mr. Jones that all data generated by Packer Engineering has been produced, regardless of whether it was relied upon in his report. We believe your colleagues confirmed the same during the deposition of Dr. Caulfield and Mr. Jones. We will write to you separately
